

Enhanced Station Initiative – Package 2 Design / Build

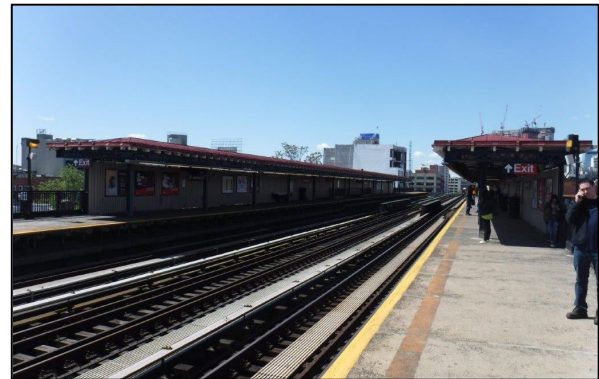

Garg Consulting Services, Inc.

The purpose of the MTA’s Enhanced Station Initiative is the complete overhaul of thirty-three (33) subway stations in all five (5) boroughs at an estimated project cost of \$881 Million. Updates included cellular service, Wi-Fi, charging stations, improved signage, subway countdown clocks, service alerts, On-The-Go Informational Dashboards, and improved station lighting. Concrete repairs, new platform edges, waterproofing, wall tile patching, and structural steel repairs will get the stations into a state of “Good Repair.”

The renovations are being done in eight "Packages," which will allow contractors to renovate three to five stations in a given area simultaneously. The second Package was along the BMT Astoria Line in Queens, namely the 30th Avenue, Broadway, 36th Avenue, and 39th Avenue Stations.

Garg provided Condition Inspection and State of Good Repair (SGR) Design for the design / build team. Specific responsibilities included:

- Condition inspection of structural members on the platforms, mezzanines, and stairs.
- Report preparation for each station.
- Complete design drawings for all SGR items.
- Design performed in accordance with the latest NYCT design guides and New York State Building Codes.
