

S-16 and S-17 Bridge Rehabilitation Program- ConnDOT

Garg performed the construction inspection for the rehabilitation of several bridges on Metro-North Railroad's (MNRR) New Haven Line as part of CTDOT's S-16 and S-17 Bridge Rehabilitation Program. The construction was performed by MNRR forces.

The major tasks of the project included:

- Monitoring and documentation of daily construction activities
- Calculation and measurement of quantities for completed construction items.
- As-built drawings.
- Field meetings with construction foremen and supervisors to discuss construction activities.
- Identification and documentation of required work not identified in original plans.
- Review of the repair plans to prioritize rehab work identification and reporting of site safety issues
