

Commodore Hull Bridge Rehabilitation Project - ConnDOT

GCS provided in-depth bridge inspection, including assistance with coordination, field inspection oversight and expertise, report review, access planning and coordination, and maintenance and protection of traffic coordination. This bridge is a large structure with three main truss spans and numerous spans carrying Route 8 over the Housatonic River. Access to the structure is difficult. **GCS** used several innovative techniques to gain access to the structure that provided 100% hands-on inspection and reduced the historical inspection time by 30%.

The major tasks of the project included:

- Bridge rehabilitation inspection
- Bridge Inspection
- Survey
